
Empirical Discriminative Separability of 12 Canonical Invariants $\mathbf{z}_{\text{inv}}$
Benign Accounts (y=0)
Confirmed Illicit Accounts (y=1)
$\tilde{\Phi}_{\text{flow}}$ (Flow Regularity)
$\lambda_u$ (Hawkes Burst)
$\mathbf{s}_{\text{fwd}}$ (Forward Taint)
$\mathbf{s}_{\text{bwd}}$ (Backward Taint)
$\Psi_{\text{asym}}$ (Degree Asymmetry)
$\sigma_{\Delta t}$ (Arrival Dispersion)
$v_A$ (Amount Velocity)
$\nu_{\text{io}}$ (IO Velocity Ratio)
$\mu_A$ (Amount Mean)
$\sigma_A^2$ (Amount Variance)
$\gamma_A$ (Amount Skewness)
$\kappa_A$ (Amount Kurtosis)
Benign
Illicit
