Declaration of Generative AI and AI-Assisted Technologies in the Manuscript Preparation Process

Manuscript Title: Risk-Controlled Spatio-Temporal Graph Learning for Anti-Money Laundering Under Extreme Imbalance and Topological Camouflage

Target Journal: Engineering Applications of Artificial Intelligence (Elsevier)

During the preparation of this work, the authors used large language model assistants solely to improve language clarity, stylistic flow, and grammatical precision. After using these tools, the authors thoroughly reviewed, verified, and edited the resulting content, and take full responsibility for the entire scientific content of the publication. All mathematical formulations, theoretical derivations, empirical experimental designs, software implementations, and analytical conclusions were independently developed by the authors. In Section 6 of the manuscript, a language model agent is investigated strictly as an experimental object within an auxiliary decision-support prototype under human oversight, rather than as an authorial contributor.
