
Empirical Discriminative Separability of 12 Canonical Invariants $\mathbf{z}_{\text{inv}}$
Benign Accounts (y=0)
Confirmed Illicit Accounts (y=1)
$\tilde{\Phi}_{\text{flow}}$ (Flow Regularity)
λ_u (Hawkes Burst)
$\mathbf{s}_{\text{fwd}}$ (Forward Taint)
$\mathbf{s}_{\text{bwd}}$ (Backward Taint)
Ψ_{asym} (Degree Asymmetry)
$\sigma_{\Delta t}$ (Arrival Dispersion)
v_A (Amount Velocity)
ν_{io} (IO Velocity Ratio)
μ_A (Amount Mean)
$\text{Var}(A)$ (Amount Variance)
γ_A (Amount Skewness)
κ_A (Amount Kurtosis)
Benign
Illicit
